

VOLUNTEERS NEEDED FOR A DRUG-RESISTANT EPILEPSY RESEARCH STUDY

Exploring a **non-invasive
focused ultrasound**
treatment for epilepsy.

Are you eligible?

- **Aged 18** or older
- Have **DRE** with seizures that are **not well controlled with anti-seizure medications**
- Have at least 4 seizures in 2 months
- Are able to have CT and MRI scans
- * *Additional criteria may apply*

Why consider participating?

- Receive **study-related medical evaluations** and interact with medical professionals
- Contribute to clinical research
- Compensation for time and travel may be available

Contact & registration

- PI Name: **Dr. Robert Fisher**
- Study Location: **Stanford**
- Study Contact: **Jordan Seliger**
- Email: jseliger@stanford.edu
- Phone: 650-460-9260

*Learn more
today!*

• • • We are evaluating a non-invasive, investigational procedure using low-intensity focused ultrasound.
• • • Focused ultrasound delivers sound waves (which you cannot hear) through the head. This study will
• • • assess safety and how the procedure may affect seizures in adults with drug-resistant epilepsy (DRE).
• • • If you or a loved one has DRE with ongoing focal-onset seizures despite medication, you may be
• • • eligible. The study lasts about 23 weeks (~6 months) with approximately 9 visits.
